Riccardo Maria Pesce

Computer Engineer | Technical Lead | Engineering and Business Solutions

Catania, Italy | CET/CEST

riccardompesce@gmail.com | https://riccardompesce.com

https://linkedin.com/in/riccardomariapesce | https://github.com/RiccardoMPesce

Professional Summary

Computer engineer and technical lead with an M.Sc. awarded 110/110 with honours. Experience connects systems design, data and delivery with stakeholder needs and commercial decisions across insurance, gaming and media.

Experience spans solution architecture, feasibility studies, requirements analysis, team and vendor coordination, and budget-conscious delivery. The career combines commercial intelligence, data engineering and enterprise integration with academic foundations in automation, control, electronics, telecommunications, IoT and artificial intelligence.

Core Competencies

Engineering leadership

From feasibility to delivery, with responsibility for the decisions in between.

Technical ownership; Architecture and feasibility studies; Team coordination; Release planning and engineering standards.

Business & commercial engagement

Connecting technical choices to the people, priorities and constraints behind them.

Requirements and stakeholder analysis; International clients and vendors; Scope negotiation; Commercial intelligence and KPI analysis.

Systems & integration

Making services, platforms and data flows work together in enterprise environments.

Distributed and event-driven systems; Enterprise integration; Cloud infrastructure; Reliability and observability.

Data & governance

Building the paths from operational data to reporting and business decisions.

Data engineering and BI; Reconciliation and validation; Regulatory reporting; Data governance and information security.

Professional Experience

ALTEN

Technical Lead · Sisal Community

Jul 2026 — Present | Rome, Italy · Fully remote

Technical ownership of a fixed-price project, connecting architecture, delivery and business priorities.

- Lead solution architecture, feasibility studies, engineering standards, team coordination and release planning within budget constraints.
- Translate business requirements into technical solutions, negotiate scope and delivery trade-offs, and coordinate vendors and stakeholders across the UK, Thailand and Albania.

- Drive distributed systems integrations and migrations involving Kafka, Redis, Kubernetes, Azure Pub/Sub and GitOps.
- Manage integrations and migrations involving Tipster and Social Plus, aligning technical choices with vendor capabilities and delivery priorities.
- Oversee security and data governance, supporting GDPR-related compliance, technical audits and delivery quality.
- Led delivery of the agreed scope on time and within budget, contributing to negotiations for a one-year extension into 2027 and additional feature purchases, with further releases scheduled.
- Conduct technical interviews for ALTEN Italy and Switzerland.

Technologies: Java, Spring Boot, Kafka, Redis, Kubernetes, Azure, Argo CD, GitOps

ALTEN

Backend Engineer · Sisal PAM

May 2025 — Jul 2026 | Rome, Italy · Fully remote

Modernization of player account services, from a complex PL/SQL codebase to modular Java services.

- Contributed, under the team lead’s coordination, to decomposing a PL/SQL codebase into approximately eight Java/Spring Boot microservices, streamlining development, testing and deployment within a time-and-materials engagement.
- Worked with event-driven services using Kafka, transactional outbox and CQRS patterns to support distributed data processing and integration.
- Developed integration and batch components with Spring Data, Spring Batch, Spring Kafka, Spring Security and Spring Cloud, using SQL databases, Oracle Cloud Infrastructure and Kubernetes.
- Supported observability, reliability and continuous modernization in collaboration with distributed engineering teams, including Sisal Albania.
- Participated in architecture discussions and technology evaluations, including experimentation with emerging Java releases.

Technologies: Java, Spring Boot, Spring Batch, Spring Security, Spring Cloud, Kafka, SQL, Oracle Cloud, Kubernetes

Discovery Reply

Software & Solutions Engineer

Jul 2023 — May 2025 | Rome, Italy · Fully remote

Enterprise integration, digital platforms and solution discovery across media and other client environments.

- Developed contract-first microservices for Sky Italy with OpenAPI, Java/Spring Boot and Kong, contributing to enterprise integration with Kubernetes, Terraform and Jenkins.
- Customized a Digital Asset Management platform with Java, PHP and React, and contributed to image-editing and authentication features through AWS serverless modernization with Lambda, DynamoDB and Cognito.
- Joined an on-site consulting engagement for Sky Deutschland in Munich, interviewing stakeholders and documenting use cases for the replacement of ScheduALL.
- Delivered and maintained web solutions for Italgas, BAPS and Mediaset using WordPress, PHP and Figma, developed custom plugins and mentored a junior colleague.
- Explored Camunda workflow orchestration and experimented with AI-assisted development, including Cline and internal Reply tools.

Technologies: Java, Spring Boot, OpenAPI, Kong, AWS, Terraform, Jenkins, PHP, React, WordPress, Figma

Gaming Innovation Group

Big Data Solutions Engineer

Jan 2022 — Jul 2023 | Saint Julian, Malta · Fully remote

Event-driven data platforms supporting international products, regulatory reporting and downstream analytics.

- Engineered microservices and distributed data pipelines supporting up to 5,000 messages per second across Lottery, Sports and Casino products.
- Designed and implemented ETL and data warehousing workflows with RabbitMQ, NiFi, Avro, Kafka and ClickHouse within a Lambda Architecture.
- Developed data reconciliation, validation and governance solutions for reporting requirements in markets including Serbia, Argentina, Croatia and Maryland, USA.
- Owned assigned projects from solution design through deployment, monitoring and troubleshooting, working with internal teams and external regulatory stakeholders.
- Implemented monitoring and alerting to detect processing failures and notify the relevant teams through Slack and email.
- Supported BI, Data Science and QA teams, with exposure to FastAPI-based machine learning deployment workflows.

Technologies: Kafka, RabbitMQ, NiFi, Avro, ClickHouse, PostgreSQL, Python, Kubernetes/OpenShift

Evolution Gaming

Commercial & Business Intelligence Analyst

Jan 2021 — Jun 2021 | Saint Julian's, Malta · Hybrid

Commercial analysis and reporting for international Key Account Managers and business leadership.

- Designed and presented BI dashboards for Key Account Managers, supporting customer portfolio analysis and product performance evaluation across GGR, wagering, player activity, churn and retention, with month-on-month and year-on-year reporting.
- Supported US commercial teams in newly regulated markets and reporting for the integrated NetEnt and Red Tiger brands.
- Built analytical sources with Apache Hive and tailored Excel reports for commercial requirements and performance investigations.
- Collaborated with Commercial Directors and Business Strategy leadership, occasionally engaging with C-level stakeholders, to connect analysis with commercial delivery planning.

Technologies: Tableau, Hive, SQL, Excel, Jira

Oney Insurance

Business & Data Solutions Analyst

Feb 2020 — Sep 2020 | Sliema, Malta · Hybrid

Business reconciliation, data integration and feasibility analysis for insurance operations serving European markets within the French Oney Group.

- Analyzed commercial and operational data to investigate discrepancies and support consistency across insurance systems.
- Worked with business stakeholders to translate requirements into data transformation and integration workflows.
- Contributed to feasibility analysis and machine learning proofs of concept for potential business applications.
- Connected analytics and data engineering with the operational requirements of European insurance products, working directly with business stakeholders.

Technologies: Java, Groovy, SQL, Python, Excel

Appen | iSoftStone (Contract work)

Rater

Feb 2017 — Apr 2020 | Remote

Rater for Appen and iSoftStone, evaluating relevance of search results, Facebook ads and accuracy of business page descriptions.

- Assessed accuracy of business-page descriptions, and relevance of ads and search results.

Technologies: Facebook Business Pages, Facebook Ads, Internal web-based evaluation platform

Education

M.Sc. in Computer Engineering · LM-32

University of Catania, Italy | 2023 | 120 ECTS credits | 110/110 with honours

Master's thesis

Deep Learning for Rest State Classification Using EEG/fMRI Data

18 ECTS credits

Rationale

EEG and fMRI provide two recorded views of brain activity. The thesis examined how deep-learning models could learn from each modality and combine their representations to classify resting-state observations.

Objective

Compare EEG-only, fMRI-only and multimodal classification on paired recordings, and assess whether combining their feature embeddings improved the results. The analysis also examined how carbon-wire-loop (CWL) channels and alpha-frequency filtering affected EEG performance.

Experiment

Used the CWL EEG/fMRI dataset, pairing EEG sequences with the corresponding fMRI frames. EEG models included a five-layer 1-D convolutional baseline and the 2-D EEGNet architecture. The baseline was evaluated with and without CWL artifact-monitoring channels; EEGNet was also evaluated using only alpha frequencies (8–12 Hz).

A 3-D CNN processed individual fMRI frames. Feature vectors from the EEG and fMRI networks were concatenated and fed to a multilayer perceptron for multimodal classification. The presentation compared training, validation and test accuracy, reporting test performance at the checkpoint with the highest validation accuracy.

Results

The summary tables report 80.36% test accuracy for EEGNet and 67.41% for its alpha-filtered variant. The 1-D baseline without CWL channels reached 50.00%. The fMRI model reached 51.04%, and the multimodal model 47.92%; combining modalities did not improve classification in these experiments.

Sensitivity to CWL channels was a central interpretation issue, while the single-frame fMRI model did not provide a useful basis for feature fusion. The conclusions emphasized understanding and preprocessing the recordings, validating each modality, and exploring other architectures or complete fMRI sequences as future work. This account is based on the thesis presentation, not an independently replicated evaluation.

Coursework and Academic Activities

Software Engineering | 9 ECTS credits | Year 1

Software development processes, requirements analysis, architecture and design. UML modelling, architectural and design patterns, verification, validation and testing connect the stages of the software lifecycle.

Reference syllabus 2019/2020: https://www.dieei.unict.it/corsi/lm-32/insegnamenti/?cod=13293

Control Systems Technology | 6 ECTS credits | Year 1

Control-system architectures, sensors, actuators and analogue/digital conversion. PID tuning and digital implementation, microcontrollers, timing constraints in control loops and introductory linear optimization, with MATLAB exercises.

Reference syllabus 2019/2020: https://www.dieei.unict.it/corsi/lm-32/insegnamenti/?cod=13295

Information Systems Security | 6 ECTS credits | Year 1

Theoretical and applied network security: cryptography, encryption methods, security protocols and secure application design. Authentication, confidentiality and the configuration of network security services.

Reference syllabus 2019/2020: https://www.dieei.unict.it/corsi/lm-32/insegnamenti/?cod=13296

Telecommunication Systems Architectures and Technologies | 9 ECTS credits | Year 1

Information theory, coding, transmission media and IP network design for convergent services. Fixed and mobile networks, radio access, mobility management, GSM, UMTS, LTE and the evolution towards 5G.

Reference syllabus 2019/2020: https://www.dieei.unict.it/corsi/lm-32/insegnamenti/?cod=13294

Industrial Automation Networks | 9 ECTS credits | Year 1

Real-time communication and schedulability in industrial and automotive systems. CAN, LIN, fieldbuses, Industrial Ethernet, PROFINET, EtherCAT and TSN; wireless automation networks and protocol evaluation with OMNeT++.

Reference syllabus 2019/2020: https://www.dieei.unict.it/corsi/lm-32/insegnamenti/?cod=13297

Advanced Computer Architectures | 6 ECTS credits | Year 1

Processor pipelines, branch prediction, memory hierarchies and performance analysis. Instruction-level, data-level and thread-level parallelism, superscalar and VLIW architectures, SIMD/GPGPU and cache coherence in multiprocessors.

Reference syllabus 2019/2020: https://www.dieei.unict.it/corsi/lm-32/insegnamenti/?cod=13298

Additional Skills for Employment | 3 ECTS credits | Year 1

Project Life Cycle course offered by AXLE ICT Solutions: 30 hours, delivered in English. Covered the entire project lifecycle from initial setup through project completion and maintenance, combining technical tools with behavioural strategies, personal soft skills and communication techniques.

Elective · Recognized Professional Experience | 9 ECTS credits | Year 1

Recognition of my professional experience at Oney Insurance, complemented by data science, software development, machine learning and analytics.

Advanced Programming Languages | 9 ECTS credits | Year 2

Language design and formal languages, type systems, memory management, exceptions and programming paradigms. Comparative study of C++, Go, Python, R and C#, including object-oriented, functional and concurrent programming.

Reference syllabus 2020/2021: https://www.dieei.unict.it/corsi/lm-32/insegnamenti/?cod=15517

Internet of Things Based Smart Systems | 9 ECTS credits | Year 2

Cyber-physical and embedded systems, smart sensors and IoT applications. MQTT, CoAP, LoRa and NB-IoT, IoT operating systems, modelling and verification, energy-efficient design and energy harvesting.

Reference syllabus 2020/2021: https://www.dieei.unict.it/corsi/lm-32/insegnamenti/?cod=15516

Distributed Systems and Big Data | 9 ECTS credits | Year 2

Distributed architectures, services, containers, messaging and cloud/fog computing. Logical clocks, coordination, fault tolerance, agreement, distributed transactions, consistency and replication, with an introduction to big-data architectures.

Reference syllabus 2020/2021: https://www.dieei.unict.it/corsi/lm-32/insegnamenti/?cod=15519

Industrial Informatics | 9 ECTS credits | Year 2

PLC architectures and IEC 61131-3 programming, including Ladder Diagram and Sequential Function Chart. Siemens TIA Portal exercises, distributed control over PROFIBUS/PROFINET and OPC UA information models, services and publish/subscribe communication.

Reference syllabus 2020/2021: https://www.dieei.unict.it/corsi/lm-32/insegnamenti/?cod=15518

Cognitive Computing and Artificial Intelligence | 9 ECTS credits | Year 2

Intelligent systems combining machine learning, multimedia analysis, knowledge representation, logic and automated reasoning. Supervised and unsupervised learning, pattern recognition, autonomous agents and practical work with deep-learning and semantic-web tools.

Reference syllabus 2020/2021: https://www.dieei.unict.it/corsi/lm-32/insegnamenti/?cod=15515

Descriptions summarize the historical syllabi linked above; the reference edition does not establish attendance in a particular year or teaching channel. Academic foundations are distinct from professional experience.

B.Sc. in Computer Engineering · L-8

University of Catania, Italy | 2019 | 180 ECTS credits

Bachelor's thesis

Domain Adaptation through Regression

3 ECTS credits

Rationale

Pretrained image classifiers offer reusable features, but different convolutional architectures produce different feature representations. The thesis explored whether regression could map one network's embeddings into another network's feature space so that a classifier already adapted to a target task could be reused.

Objective

Classify images of ants and bees while comparing regression-based adaptation with individual training on the target task. The goal was to examine both classification accuracy and measured training time across different source–reference network pairs.

Experiment

Used ImageNet-pretrained Inception v3, ResNet18 and DenseNet121 models in Python with PyTorch. Images were resized and normalized before extracting the feature embeddings preceding the classification layer. For each network pair, the same image was processed by both networks, with one network adapted to the target task serving as the reference.

A scikit-learn Ridge regressor mapped the source embeddings to the reference feature space before classification. All six directed pairings were compared with the individually trained networks. The runs were performed on CPU. Individual CNN training used 25 epochs, stochastic gradient descent, a batch size of four, a learning rate of 0.1 and momentum of 0.9.

Results

ResNet18 adapted to DenseNet121 and DenseNet121 adapted to ResNet18 both reached 95% accuracy, with reported training times of 3 minutes 33 seconds and 3 minutes 38 seconds. Individual training reached 96% for ResNet18 in 12 minutes 43 seconds and 95% for DenseNet121 in 14 minutes 52 seconds.

Pairings involving Inception reached 61–74% accuracy, below its individually trained result of 96%. The results therefore varied with the network pairing. Evaluation used a small two-class dataset and its validation partition to assess adaptation; these measurements describe that setup and do not establish the same accuracy or time savings on other datasets.

Coursework and Academic Activities

Mathematical Analysis I | 9 ECTS credits | Year 1

Real and complex numbers, limits and continuity, differential calculus for functions of one variable, numerical series and Riemann integration. Mathematical tools for analysing functions and solving quantitative problems.

Reference syllabus 2015/2016: https://www.dieei.unict.it/corsi/l-8-inf/insegnamenti/?cod=2916

Chemistry | 9 ECTS credits | Year 1

Atomic structure, chemical bonding, states of matter and the behaviour of common materials. Chemical thermodynamics, kinetics, equilibria, electrolyte solutions, electrochemistry and introductory organic chemistry.

Reference syllabus 2015/2016: https://www.dieei.unict.it/corsi/l-8-inf/insegnamenti/?cod=2922

Engineering Economics | 6 ECTS credits | Year 1

Economic reasoning for engineering decisions: costs and benefits, markets, production and business organization. Financial statements, project investment analysis and the economic evaluation of engineering alternatives.

Reference syllabus 2015/2016: https://www.dieei.unict.it/corsi/l-8-inf/insegnamenti/?cod=2919

Computer Science Fundamentals | 9 ECTS credits | Year 1

Computer science and procedural programming fundamentals. Core data structures, basic algorithms, introductory computational complexity and application development in ANSI C, with an emphasis on problem solving and debugging.

Reference syllabus 2015/2016: https://www.dieei.unict.it/corsi/l-8-inf/insegnamenti/?cod=2928

Linear Algebra and Geometry | 9 ECTS credits | Year 1

Linear systems and linear maps, matrix eigenvalues and diagonalization. Linear geometry of lines and planes, conic sections and quadric surfaces.

Reference syllabus 2015/2016: https://www.dieei.unict.it/corsi/l-8-inf/insegnamenti/?cod=2913

Physics I | 9 ECTS credits | Year 1

Mechanics and thermodynamics: motion, Newton’s laws, work, energy and conservation principles. Particle systems, rigid-body dynamics and oscillations connect mathematical models with physical problems.

Reference syllabus 2015/2016: https://www.dieei.unict.it/corsi/l-8-inf/insegnamenti/?cod=2925

Foreign Language Proficiency Assessment | 3 ECTS credits | Year 1

Foreign-language proficiency assessment recorded as a 3-credit activity. The transcript does not identify the language, proficiency level or a separate syllabus for this assessment.

Physics II | 9 ECTS credits | Year 2

Electromagnetism and optics: electric and magnetic fields, electromagnetic induction, Maxwell's equations and wave propagation. Geometrical and physical optics include reflection, refraction, interference and diffraction.

Reference syllabus 2015/2016: https://www.dieei.unict.it/corsi/l-8-inf/insegnamenti/?cod=1681

Operating Systems | 6 ECTS credits | Year 2

Operating-system design and resource management, using Linux as a principal reference. Processes, threads, CPU scheduling, synchronization, IPC, deadlocks, virtual memory, file systems, I/O and POSIX programming.

Reference syllabus 2015/2016: https://www.dieei.unict.it/corsi/l-8-inf/insegnamenti/?cod=1682

Mathematical Analysis II | 9 ECTS credits | Year 2

Sequences and series of functions, differential and integral calculus in several variables, and differential equations and systems. Methods for understanding and constructing mathematical models in engineering.

Reference syllabus 2015/2016: https://www.dieei.unict.it/corsi/l-8-inf/insegnamenti/?cod=1683

Object-Oriented Programming | 6 ECTS credits | Year 2

Object-oriented programming in Java: classes, encapsulation, inheritance, polymorphism and exception handling. Generics, multithreading, network programming and graphical interfaces with Swing.

Reference syllabus 2015/2016: https://www.dieei.unict.it/corsi/l-8-inf/insegnamenti/?cod=1679

Electrical Engineering | 9 ECTS credits | Year 2

Circuit models, Kirchhoff's laws, network theorems and systematic analysis methods. Transient and sinusoidal responses, phasors, Laplace methods, coupled circuits and introductory three-phase and power applications.

Reference syllabus 2015/2016: https://www.dieei.unict.it/corsi/l-8-inf/insegnamenti/?cod=1680

Automatic Control | 12 ECTS credits | Year 2

The integrated course covers Systems Theory and Automatic Control: dynamic models, state-space and transfer functions, stability, controllability and observability. Feedback design, compensation, frequency-response methods and digital control are supported by MATLAB exercises.

Reference syllabus 2015/2016: https://www.dieei.unict.it/corsi/l-8-inf/insegnamenti/?cod=1684

Signal Theory | 9 ECTS credits | Year 2

Representation of deterministic and random signals in time and frequency. Signal transformations through linear and nonlinear systems, with probability foundations for random-signal analysis and telecommunications.

Reference syllabus 2015/2016: https://www.dieei.unict.it/corsi/l-8-inf/insegnamenti/?cod=1678

Computer Architecture | 9 ECTS credits | Year 3

Combinational and sequential logic, finite-state machines and hardware design with VHDL. Computer organization, MIPS64 assembly, datapaths, control units, pipelines, memory hierarchies and cache performance.

Reference syllabus 2016/2017: https://www.dieei.unict.it/corsi/l-8-inf/insegnamenti/?cod=3008

Electronics | 9 ECTS credits | Year 3

Electronic devices and their use in analogue and digital circuits. Diodes, bipolar and MOS transistors, amplifiers, frequency response, digital circuits and analogue-to-digital conversion.

Reference syllabus 2016/2017: https://www.dieei.unict.it/corsi/l-8-inf/insegnamenti/?cod=3007

Internet Architecture and Web Programming | 9 ECTS credits | Year 3

Internet architecture and computer networks: application protocols, TCP/UDP, IP addressing, subnetting, routing and wired/wireless link technologies. Web-oriented programming connects network services with application development.

Reference syllabus 2016/2017: https://www.dieei.unict.it/corsi/l-8-inf/insegnamenti/?cod=3010

Additional Skills for Employment | 3 ECTS credits | Year 3

Theoretical discussion of an end-to-end machine learning data pipeline, connected to my work evaluating advertisement relevance and Business Page descriptions for Appen. Considered how a hypothetical pipeline could extract content and evaluator judgments, transform them through cleaning, normalization, deduplication and label-quality checks, and load raw data, curated datasets and annotation metadata into separate storage layers. Discussed dataset versioning, train/validation/test separation, feature preparation, and how human assessments could support training and evaluating classification or ranking models. The architecture is illustrative; it does not describe Appen's internal platform.

Fixed and Mobile Systems Architecture Laboratory | 6 ECTS credits | Year 3

Microcontroller programming and hardware/software prototyping with Arduino. Sensors and physical interfaces, I/O, communication buses, IoT operating systems and introductory FPGA implementation.

Reference syllabus 2016/2017: https://www.dieei.unict.it/corsi/l-8-inf/insegnamenti/?cod=3011

Databases and Information Systems | 9 ECTS credits | Year 3

Relational data modelling, SQL, transactions, normalization, indexing and query optimization, alongside NoSQL concepts. Database-backed web information systems, MVC, client/server programming and web-application security.

Reference syllabus 2016/2017: https://www.dieei.unict.it/corsi/l-8-inf/insegnamenti/?cod=3009

Electrical Communications | 6 ECTS credits | Year 3

Digital baseband transmission, line coding, intersymbol interference and error rates. Sampling, quantization and PCM, analogue modulation, digital modulation schemes, MIMO and OFDM.

Reference syllabus 2016/2017: https://www.dieei.unict.it/corsi/l-8-inf/insegnamenti/?cod=3012

Big Data | 6 ECTS credits | Year 3

Mining large datasets using MapReduce and Hadoop, frequent-itemset algorithms and similarity search. Recommendation systems, dimensionality reduction, PageRank, graph/network analysis and text mining.

Reference syllabus 2018/2019: https://web.dmi.unict.it/corsi/lm-18/insegnamenti?cod=10817

Machine Learning | 6 ECTS credits | Year 3

Probability foundations, linear models for regression and classification, neural networks and deep learning. Algorithm design, optimization, model evaluation and prototyping with Python libraries.

Reference syllabus 2018/2019: https://web.dmi.unict.it/courses/lm-18/course-units/?cod=10843

Descriptions summarize the historical syllabi linked above; the reference edition does not establish attendance in a particular year or teaching channel. Academic foundations are distinct from professional experience.

Projects

CMD Call Graph

Open-source contribution

Contributed to a Python tool that turns calls within Windows CMD scripts into Graphviz visualizations, making legacy script structure easier to inspect. The project is hosted in Microsoft's public GitHub organization.
